

Our Catalog enables:

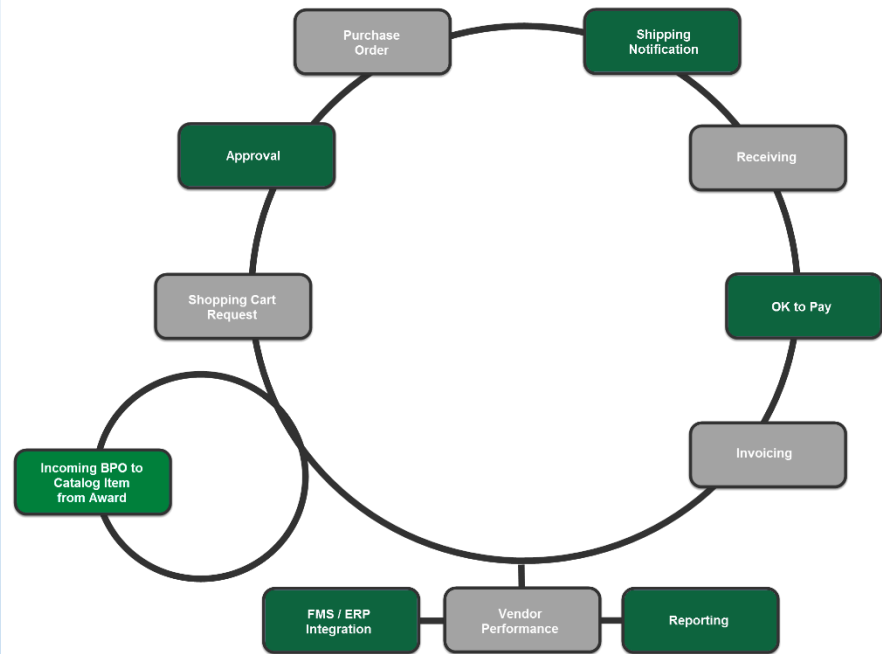

- Fast, secure, accurate, and easy-to-use methods to create zero-defect purchase orders.
- Purchases to be made with very little setup or training.
- Web access 24/7 via any modern internet browser.
- Established integration points for exchanging documents with existing government systems and vendor back-end fulfillment systems.
- Term Contracts available for viewing and ordering through a centralized, master electronic catalog.
- Approvals using an integrated workflow through an e-mail messaging system.
- A user-friendly search capability with the ability to search by Commodity, Vendor Part Number, Vendor Name, etc.
- The ability to load Account codes or Procurement Card information so that all transactions can be tied to authorized funding sources.

Benefits of SicommNet's Electronic Catalog

- Provides a secure and easy to use online location where cooperative bid commodities and services can be made available to shoppers throughout the state.
- Eliminates the costs associated with "unauthorized" shopping and ensures the lowest cost option to shoppers throughout the state.
- Easy access for government entities to login using a web browser and shop cooperative contracts bid within the cooperative.
- Multiple delivery/billing points. Each government entity can have an indefinite number of delivery and billing points preloaded into the system. Additionally shoppers can manually input a delivery point which can be flagged for later audit.
- The ability to monitor and track the amount spend on specific goods/services purchased off the catalog. The iCatalog will also include Ad Hoc Reporting which allows users to create their own dashboard of information that is of interest to them creating their own "Performance Indicators."
- The Electronic Catalog can be interfaced to an inventory management system(s) to allow shoppers the ability to purchase from your warehouse before buying from the cooperative contract.

iCATALOG

Simplifies the Procurement Process

The electronic catalog was designed specifically to simplify your purchasing processes. The system incorporates high-level customizations for the specific nuances and requirements of your procurement such as intuitive multi-level workflow approvals, pre-encumbrance of funds and line item cost accountability.

This Software as a Service (SaaS) uses an Internet based electronic catalog of hosted or remotely accessed items. The electronic catalog offers a limitless number of accounts, users, customers and a practically limitless dollar throughput. Best of all, the Electronic catalogue is accessible to all authorized individuals inside or outside of government offices or companies via capable Internet browsers on such devices as Desktop and Laptop.

Reporting: Aside from reduced processing costs, the major benefit of electronic purchasing is the reduction of funds spent.

Data Extracts-run reports outside our provided ad hoc reporting tool, our system will make data available in a format where states can import their data into their own report writing application.
